Product Description

Silver Aluminum Coil for Channel Letter with Customization Color

Product Description:

Channelume Aluminum Product Overview

The Channelume Aluminum is available in four surface treatment options - anodized, powder coated, brushed, and polished. Each of these treatments offers unique benefits and can be chosen based on specific project requirements.

Anodized: This surface treatment provides a protective layer to the aluminum, making it more resistant to corrosion and wear. It also gives a modern, metallic look to the channel letters.

Powder Coated: This treatment involves applying a dry powder coating to the aluminum surface and then heating it to create a durable and long-lasting finish. It is available in a variety of colors and can be customized to match any design.

Brushed: The brushed surface treatment gives the aluminum a unique, textured finish, making it stand out from other channel letter materials. It is perfect for creating a more rustic or industrial look.

Polished: This surface treatment involves buffing the aluminum to a smooth and shiny finish, giving the channel letters a sleek and professional look. It is an excellent choice for high-end projects.

Features:

Durable and long-lasting
Waterproof and weather-resistant
Lightweight and flexible
High-quality raw material - aluminum
Easy to cut and shape
Available in different sizes and alloys
Suitable for both indoor and outdoor use
